

Department of Mathematics

Master of Science in Industrial Mathematics Student Handbook

March 10, 2022

This handbook provides a detailed description of the Master of Science in Industrial Mathematics (aka the Professional Science Master's (PSM) in Industrial Mathematics) program with specific information for this program. More general information related to academic program and graduates degrees can be found in the **Graduate Student Handbook** (available online) by the Graduate Office in the Department of Mathematics, and other University documents and online resources. If you have any questions about the requirements, or have a question not answered here, feel free to come to the Office of Graduate Studies, C213 Wells Hall, for help.

For particular information about the program, contact Dr. Peiru Wu, Director of PSM in Industrial Mathematics at peiruwu@msu.edu or msim@math.msu.edu .

I Program Overview

Overview

The goal of Master of Science in Industrial Mathematics (MSIM) program is to produce generalized problem solvers of great versatility, capable of moving within an organization from task to task. The program has been successfully training data analysts/data scientists, mathematician, and problem solvers for leadership positions in industry for two decades because

- The graduates will have studied standard mathematical and statistical tools, and computer science principles to strengthen data analytics skills and machine learning skills.
- They will have gained experience in hands-on project development for real-world problems proposed by local companies and they will received training in technical writing for the project reports to meet industrial standard.

The degree requires 30 credits of coursework, the successful completion of the Certificate Program in Project Management, and the successful completion of an oral masters certifying examination on the student's portfolio of completed projects.

Program Components (See **Section III Program Curriculum** for a detailed description)

- Industrial Mathematical Core Courses (6 credits, MTH 843 (Fall), MTH 844 (Spring))
- Elective and Cognate Courses (24 credits, MTH, STT, CSE/CMSE etc.)
- Certificate in Project Management (PHM 857, as for a “not-for-credit” option, first Summer)
- Portfolio Defense (last semester)

Professional Science Master's (PSM) Program: The MSIM program has blossomed since its inception since late 90s (PSM affiliation in 1998). With initial support from the Alfred P. Sloan Foundation, our program, called the PSM in Industrial Mathematics continues to get national recognition as one of the earliest and the best-established Professional Science Master's (PSM).

Recall, the PSM program nationwide is an innovative, new graduate degree designed to combine advanced training in science or mathematics, while simultaneously developing workplace skills highly valued by employers. “Professional Science Master's (PSMs) are designed for students who are seeking a graduate degree in science or mathematics and understand the need for developing workplace skills valued by top employers. A perfect fit for professionals because it allows you to pursue advanced training and excel in science or math without a Ph.D., while simultaneously developing highly-valued business skills.” (See the national PSM website at <https://www.professionalsciencemasters.org> for more descriptions). The PSM programs in US have two decades of history with continued success because of High Demand and Science-Plus Curricula (Go to the national PSM website for more details).

One of major successes of the PSM in Industrial Mathematics program at MSU is our twenty years of industrial partnership and strong connections with local companies. We also have the industrial advisory board from 30 companies since 1999 and those industrial advisors include executive, president, vice president, director, technical fellow, and chief analytic officer from

world well-known companies. Another success is that our graduates are employed in 25 states with ~100% of placement rate that were actively seeking employment.

II Admission Requirements

Admission

Students who wish to apply for an admission to the Master of Science in Industrial Mathematics (MSIM) program should

- Have completed the mathematics or applied mathematics course normally required for the bachelor's degree with a major in mathematics, statistics, economics, physics, or any science or engineering.
- Have coursework at the senior level in mathematical analysis, linear algebra, and differential equations.
- Have some familiarity with mathematical software programs such as Mathematica, MATLAB, as well as some knowledge of programming languages.

Application will be reviewed based on academic record that shows background for success in the program, and professional goal that would be furthered by the coursework and training in the program, as well as letters of recommendation that indicate the likelihood of success for meeting the program requirements and completing the MSIM degree.

We are accepting late applications and please contact us at msim@math.msu.edu for discussion.

How to Apply

A complete application for the MSIM program includes the following:

1. MSU Graduate Application at <https://admissions.msu.edu/apply/graduate-students> to indicate your intended major as Industrial Mathematics.
2. The Mathematics Department requires a current CV/resume, Academic Statement and Personal Statement be included or uploaded within this MSU Graduate Application.
3. Three letters of recommendation are required, and these are included in the application also.
4. Within the application you will select Industrial Mathematics as your intended major and you will be asked for the supplemental questions. Within these questions should contain the Math and Statistics Classes you have (or will have) taken at the Junior, Senior, or Graduate level.
5. Official transcripts of all college work (undergraduate and graduate), including diplomas and certificate are also required. These are to be sent to our department directly from the school(s) which you attended.

Our mailing address is as follows:

Graduate Office
Department of Mathematics
619 Red Cedar Rd. Room C213
Michigan State University
East Lansing, MI 48824

There is no need to send more than one set of transcripts. We will forward the original transcript to the Office of Admissions.

6. GRE Scores - The three standard sections of the GRE, verbal, quantitative, and analytic are required for admission.
7. TOEFL Scores (International Students Only) - Applicants for whom English is not their primary language are required to submit TOEFL (Test of English as a Foreign Language) or IELTS (International English Language Testing System) scores. TOEFL scores must meet the University minimum requirements: no subscore below 19 for reading, listening, and speaking; no writing subscore below 22; with a minimum total score of 80. For more details see: <https://grad.msu.edu/english-language-competency>
8. The financial proof (Affidavit of Support for Graduate International Students at https://grad.msu.edu/sites/default/files/content/apply/AffidavitofSupport_form.pdf) for International Students. See more information regarding the Financial Proof (e.g., Estimated funding requirements for international students) at <https://grad.msu.edu/internationalapplicants>

Applications are accepted for Fall Semester only. We do not accept applications for Spring or Summer Semester.

III Program Curriculum

In addition to meeting the requirements of the University and the College of Natural Science, the MSIM student must complete a total of 30 credits of graduate coursework including (1) core courses, (2) elective and cognate courses, (3) the successful completion of the Certificate Program in Project Management, and (4) the successful completion of an oral masters certifying examination on the student's portfolio of completed projects.

Core Courses (6 credits)

MTH 843 Survey of Industrial Mathematics (fall semester)

MTH 844 Projects in Industrial Mathematics (spring semester)

Elective and Cognate Courses (24 credits)

A minimum of two of the following courses:

MTH 810 Error-Correcting Codes

MTH 841 Boundary Value Problems I

MTH 842 Boundary Value Problems II

MTH 847 Partial Differential Equations I

MTH 849 Partial Differential Equations II

MTH 850 Numerical Analysis I
MTH 852 Numerical Methods for ODE
MTH 880 Combinatorics
MTH 881 Graph Theory

A minimum of two of the following courses:

STT 801 Design of Experiments
STT 802 Statistical Computation
STT 843 Multivariate Analysis
STT 844 Time Series Analysis
STT 847 Analysis of Survival Data
STT 861 Theory of Probability and Statistics I
STT 862 Theory of Probability and Statistics II
STT 863 Applied Statistics Methods I
STT 864 Applied Statistics Methods II
STT 866 Spatial Data Analysis
STT 875 R Programming for Data Sciences
STT 886 Stochastic Processes and Applications
STT 888 Stochastic Models in Finance

A minimum of two of the following courses:

CMSE 801 Introduction to Computational Modeling
CMSE 802 Methods in Computational Modeling
CMSE 820 Mathematical Foundations of Data Science
CMSE 821 Numerical Methods for Differential Equations
CMSE 822 Parallel Computing
CMSE 823 Numerical Linear Algebra
CSE 802 Pattern Recognition and Analysis
CSE 803 Computer Vision
CSE 830 Design and Theory of Algorithms
CSE 835 Algorithmic Graph Theory
CSE 836 Probabilistic Models and Algorithms in Computational Biology
CSE 841 Artificial Intelligence
CSE 847 Machine Learning
CSE 860 Foundations of Computing
CSE 872 Advanced Computer Graphics
CSE 880 Advanced Database Systems
CSE 881 Data Mining
CSE 885 Artificial Neural Networks
EC 811A Mathematical Applications in Economics
EC 811B The Structure of Economic Analysis
EC 812A Microeconomics I
EC 812B Microeconomics II
EC 813A Macroeconomics I
EC 813B Macroeconomics II and its Mathematical Foundations
EC 820A Econometrics IA
EC 820B Econometrics IB

ECE	849	Digital Image Processing
ECE	863	Analysis of Stochastic Systems
ME	830	Fluid Mechanics I
ME	840	Computational Fluid Dynamics and Heat Transfer
ME	872	Finite Element Method
MKT	805	Marketing Management
MKT	806	Marketing Research for Decision Making
MKT	816	Marketing Analysis
MKT	819	Advanced Marketing Research
MKT	864	Data Mining in Marketing
SCM	800	Supply Chain Management
SCM	815	Emerging Topics in Supply Management
SCM	826	Manufacturing Design and Analysis
SCM	833	Decision Support Models
SCM	843	Sustainable Supply Chain Management
SCM	853	Operations Strategy
SCM	854	Integrated Logistics Systems

The students can learn more about the course descriptions on The Office of the Registrar website at <https://reg.msu.edu/Courses/Search.aspx>.

The students will discuss with the academic advisor (program director) about your course planning prior to fall semester. See Section **IV Other Information** for course planning examples.

Certificate Program in Project Management (only offer in summer)

It requires completion of PHM 857 Project Management, covering such topics as formal project management culture, principles, knowledge areas, and terminology. It will normally be undertaken **during the first year of enrollment** as a “not-for-credit” option. Certification will also require participation in Industrial Mathematics-specific discussion sessions. After completion of the certificate program is approved by the instructors, the Industrial Mathematics Program, and the Associate Dean of the College of Natural Science, the Office of the Registrar will enter the certificate on the student’s academic record along with the term in which it was completed.

Portfolio Defense

It requires defending a portfolio of major work to fulfill the requirements of the MSIM program in the last semester. This includes at least three project reports written as part of MTH 843 and the industrial project report(s) done as your participation in MTH 844 project team(s) plus possible projects done under other course during your study in the program. The defense is about **1.5 hours** oral examination conducted by three MSU faculty members. The students are expected to be thoroughly conversant with their entire portfolio and so are expected to do the following from memory with little, if any, reference to the individual reports.

IV Other Information

Examples of Course Planning

The following course planning are completed by MSIM graduates in the past to meet the course requirements for a total of 36 credits (i.e., Core (2), MTH (4), STT (2), Cognate (4), 12 courses in general) in addition to successful completion of the Certificate Program (PHM 857) and the portfolio defense.

Form of Annual Progress Review for the PSM Students

PERFORMANCE EXPECTATIONS FOR THE STUDENTS IN PSM IN INDUSTRIAL MATHEMATICS AT MICHIGAN STATE UNIVERSITY

Student (Print) _____

Semester _____

Student (Signature*) _____

Date _____

* Signature acknowledges review; it does not imply that student agrees with all comments.

Advisor (Signature) _____

Date _____

1. PROFESSIONAL CRITERIA:

- a) Professional Department – In advance of each semester, the student will provide to his/her advisor a formal memo outlining semester courses and goals. Each student is expected to prepare for and attend job fairs, and to inform the program coordinator via memo of the outcome of each fair. All academic and professional duties are to be completed within schedule.
- b) Team Building – Each student will promote teamwork while performing as an individual contributor during the course work and projects in MTH 843 and MTH 844. Each team member must be open and candid with their peers and faculty manager. Students are expected to study teaming theory and to continually practice and improve their teaming skills.
- c) Communication Skills – Each student will communicate clearly, concisely, and professionally. This requires timely oral and written communications with the program coordinator, peers and faculty manager regarding projects, summer internships (or co-ops), job searches, and professional improvement etc. Students are expected to continually improve their communication skills.

2. PERFORMANCE EXPECTATIONS:

Top:	Middle:	Low:
Performance that substantially exceeds the expectations of the PSM student	Performance that fully meets the expectations of the PSM student	Performance that does not meet the expectations of the PSM student
<ul style="list-style-type: none"> ▪ Student excelled at obligations as a professional graduate and demonstrated initiative 	<ul style="list-style-type: none"> ▪ Followed directions and discharged obligations in this professional training program 	<ul style="list-style-type: none"> ▪ Reluctantly followed directions or resisted training in the program
<ul style="list-style-type: none"> ▪ Recognized a need and took significant action in this professional training 	<ul style="list-style-type: none"> ▪ Understood role and cooperated with training positively 	<ul style="list-style-type: none"> ▪ Minimal understanding of training and minimal action beyond what was asked
<ul style="list-style-type: none"> ▪ Exceeded major goals in a way that benefited personal growth and learning 	<ul style="list-style-type: none"> ▪ Successfully achieved professional and personal goals that meet the program requirements 	<ul style="list-style-type: none"> ▪ Barely meet the program requirement and minimal improvement related to development goals
<ul style="list-style-type: none"> ▪ Consistently demonstrated PSM professionalism and discipline 	<ul style="list-style-type: none"> ▪ Regularly demonstrated PSM professionalism and discipline 	<ul style="list-style-type: none"> ▪ Poorly demonstrated PSM professionalism and discipline

3. PERFORMANCE REVIEW AND IMPROVEMENT AREAS BY THE STUDENT*:

* Read items 1 and 2 regarding the criteria and expectations for the students in Professional Science Master's (PSM) Program in Industrial Mathematics.

4. PERFORMANCE SHARED VALUES:

Shared Value	Excellent	Adequate	Needs Development
Professional Improvement			
Integrity/Attitude			
Promptness			
Open/Clear Communication			
Teamwork			
Academic Development			

5. PERFORMANCE IMPROVEMENT AREAS AND COMMENTS BY THE ADVISOR:
